

A NEW APPROACH IN THE TREATMENT OF THE LOOSE SKIN

IN ONLY ONE MIXTURE!

**Advantages:**

- Fast results
- Smaller doses
- High local absorption
- No irritability

**DMAE and THYMOMODULIN (TIMOMODULINA)**

Two proven efficient drugs in the treatment of loose skin and signs of aging. To effectively fight all the signs of aging, you must treat the loss of elasticity, skin tone, and the formation of wrinkles. The modern practitioner uses medicines that increase cutaneous immunity, sweep free radicals and act as precursors of neurotransmitters, inhibitors or activators of endogenous enzymes.

DMAE 25mg/ml –2ml. Box of 10 Vials

DMAE is commonly used in topical formulas for anti-aging. In injectable form it produces efficacious, faster results as it does not need to permeate the cutaneous layer. It acts in the neuromuscular union, as a precursor of acetylcholine, the neurotransmitter responsible for muscular contraction, increasing the overall tone of the skin. DMAE acts quickly and lasts long. No major side effects have been noted.

THYMOMODULIN 25mg/ml is extracted from the Thymus gland. It is an immunomodulator that increases, lymphocyte T, cells CD3, CD4 and CD8, neurotrophic functions and regulates levels of IgA and IgG. Studies have shown that Thymomodulin has no toxicity.

Thymomodulin is effective in erasing smoker's lines and cleansing the skin of harmful pollutants such as smoke. It is also effective on sensitive skin and helps reverse photo ageing.

ALPHA LIPOIC ACID 50mg/ml

Powerful antioxidant and excellent intracellular regulator that:

- Sweeps the oxygen singlet, OH, HOCl, O<sub>2</sub> and ROO
- Regenerates ascorbate and its ascorbil radical

Regenerates tocoferol and its tocoferil radical

Increases glutathione cellular diminishing its redox

Protects against aldehyde reactions (important for smokers).

In dermatology, it increases lipoic acid and the levels of coenzyme Q10, which are lost by lipoic acid depletion due to UV rays exposure.
